

VORSTEINER E60 M5 SEDAN

The E60 M5 sedan features lightweight carbon fiber aerodynamic enhancements to complement the body lines of this race inspired sports sedan. The front end is modified with a 2-piece carbon fiber front spoiler that is not only proven to improve aerodynamics & downforce but completes the appearance of the factory nose.

The rear end of the vehicle features a more aggressive deck lid wing spoiler with a visible carbon fiber insert that blends perfectly with the body colored paint.

Additionally a rear carbon fiber rear diffuser enhances the appearance of the rear bumper while carefully preserving the factory body lines.

Finally a sculpted carbon fiber power dome hood with elegantly designed dual ventilation openings aids in cooling the V10 engine bay for improved performance.

Aerodynamic & Accessories Guide:

VRS aero 2-piece front add on splitters dry carbon fiber

VRS aero rear deck lid spoiler dry carbon fiber

VRS aero rear diffuser dry carbon fiber

VRS power dome hood with ventilation dry carbon fiber

Perfection Redefined.
