

VORSTEINER E63 M6 COUPE

The E63 M3 coupe features lightweight carbon fiber aerodynamic enhancements to complement the body lines of this race inspired sports coupe. The front end is modified with a new bold front add-on chin spoiler that is not only proven to improve aerodynamics & downforce but completes the appearance of the factory nose.

To balance the downforce and air flow of the front end a carefully engineered carbon fiber boot lid was added that reduces weight by up to 40% from the factory unit and keeps the tail end planted during high speed driving.

Finally a sculpted carbon fiber power dome hood with elegantly designed dual ventilation openings aids in cooling the V10 engine bay for improved performance.

Aerodynamic & Accessories Guide:

VRS aero front add on spoiler dry carbon fiber

VRS power dome hood with ventilation dry carbon fiber

VRS aero boot lid with integrated wing dry carbon fiber

Perfection Redefined.
